DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 5-7, 9-11, 13-15, 17 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Adams et al. (U.S. 5,026,748).

Adams discloses a thermally conductive adhesive comprising all of the applicant's claimed and disclosed limitations of the instant invention.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4, 8, 12 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Adams et al. (U.S. 5,026,748) in view of Ameen et al. (U.S. 5,545,473).

Adam's invention discloses all of the claimed limitations from above except for the thermal conducting material comprising a second distribution of thermally

conductive particles includes at least one particle selected from the group consisting of aluminum nitride (AlN), aluminum oxide (Al₂O₃), boron nitride (BN), aluminum, and copper.

However, Ameen teaches the use of a second distribution of particles includes at least one particle selected from the group consisting of aluminum nitride, aluminum oxide, boron nitride, silver, diamond, or aluminum and copper (column 4, lines 31-38).

Given the teachings of Ameen, it would have been obvious to one of ordinary skill in the art at the time of the invention modify the thermally conductive adhesive of

Adams with the thermal conducting material comprising a second distribution of thermally conductive particles includes at least one particle selected from the group consisting of aluminum nitride (AlN), aluminum oxide (Al₂O₃), boron nitride (BN), aluminum, and copper.

Doing so would provide enhance heat transfer and conduction through the interface material.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following references are cited for disclosing related limitations of the applicant's claimed and disclosed invention. Hanrahan, Martin, Nakai et al, Deeney, Bunyan et al, Schuft, Layton et al, Booth et al, Daszkowski, Fujimori et al and Ameen et al, Webb, McCullough, Smith et al, Nguyen et al, Mercuri et al and Houle et al.
